

Skills

- Languages: Javascript, Python, C++, PHP, SQL, HTML, CSS, Java
- Tools: React, Redux, Node, MongoDB, SQL, AngularJS, Flask, AWS, Numpy, Scikit-learn, Pandas

Experience

RiverPay Software Engineering Co-op - San Francisco Bay Area May 2019 - Present

- Implemented signature based auth service from scratch, securing data of 2000+ merchants
- Migrated monolithic systems to microservices architecture, improving modularity of software
- Moved Redis message broker to AWS SQS with Lambda, removing need for polling via cron
- Created merchant-facing payment API utilizing serverless microservices and AWS Lambda
- Built WordPress extension enabling integration of payment gateways into e-commerce stores

Bonfire Interactive Software Engineering Co-op - Kitchener Sept 2018 - Dec 2018

- Developed and maintained issue detection tool in Python, reducing client support load ~25%
- Cut internal tool load time by ~70% by implementing asynchronous fetching from Zendesk API
- Wrote crucial parts of 1st feature built on React/Node, kicking off tech stack modernization
- Created Node API resources following factory design pattern with complete unit test coverage

University of Waterloo Computing Assistant - Waterloo Jan 2018 - Apr 2018

- Developed templates to bootstrap web projects allowing quick creation of new internal tools

Projects

EngHack 2019 <https://www.enghack.com> Jan 2019 - June 2019

- Sole developer of website for MLH hackathon that received 600+ unique applications
- Built tool to collect emails for mailing list used 200+ times by website visitors

Movie Review Classifier <https://github.com/lee-ma/movie-review-classifier> May 2019

- Trained model using Logistic Regression with Stochastic Gradient Descent using scikit-learn and feature vectorizing with Numpy, achieving sentiment classification with ~95% accuracy
- Embedded model into Flask webapp with user feedback to continually improve model accuracy

SmartEQ <https://github.com/lee-ma/SmartEQ> Jan 2019

- Winner of Sunlife Best Healthy Living Hack and TD Best Green Hack at QHacks 2019
- Utilized Microsoft Azure Cognitive Science APIs and webcam for emotion analysis, with SocketIO for continuous stream of data between React client and Flask API

Education

University of Waterloo Sept 2017 - May 2022 (Expected)

- BSc in Computer Engineering - 80% Cumulative Average
