

## Skills

**Languages:** Javascript, Python, C++, PHP, SQL, HTML, CSS, Java

**Tools:** React, Redux, Node, MongoDB, SQL, AngularJS, Flask, AWS, Numpy, Scikit-learn, Pandas

## Experience

**RiverPay** | Software Engineering Co-op - SF Bay Area May 2019 - Aug 2019

- Implemented signature based auth service from scratch, securing data of 2000+ merchants
- Migrated Redis message service to AWS SQS and Lambda, removing need for polling with cron
- Created merchant-facing payment API utilizing serverless microservices and AWS Lambda
- Built WordPress extension enabling integration of payment gateways into e-commerce stores
- Refactored admin tool to utilize aggregated SQL table removing need to query multiple tables

**Bonfire Interactive** | Software Engineering Co-op - Kitchener Sept 2018 - Dec 2018

- Developed and maintained issue detection tool in Python, reducing client support load ~25%
- Wrote crucial parts of 1st feature built on React/Node, kicking off tech stack modernization
- Resolved multiple security issues in core app, including XSS vulnerabilities and leaking data
- Cut internal tool load time by ~70% by implementing asynchronous fetching from Zendesk API

**University of Waterloo** | Computing Assistant - Waterloo Jan 2018 - Apr 2018

- Developed templates to bootstrap web projects allowing quick creation of new internal tools

## Projects

**EngHack 2019** | enghack.com Jan 2019 - June 2019

- Sole developer of website for MLH hackathon that received 600+ unique applications
- Built tool to collect emails for mailing list used 200+ times by website visitors

**Movie Review Classifier** | github.com/lee-ma/movie-review-classifier May 2019

- Trained model using Logistic Regression with Stochastic Gradient Descent using scikit-learn and feature vectorizing with Numpy, achieving sentiment classification with ~95% accuracy
- Embedded model into Flask webapp with user feedback to continually improve model accuracy

**SmartEQ** | github.com/lee-ma/SmartEQ Jan 2019

- Winner of Sunlife Best Healthy Living Hack and TD Best Green Hack at QHacks 2019
- Utilized Microsoft Azure Cognitive Science APIs and webcam for emotion analysis, with SocketIO for continuous stream of data between React client and Flask API

## Education

**University of Waterloo** Sept 2017 - May 2022 (Expected)

- BAsC in Computer Engineering - 80% Cumulative Average
